TANDEM ROCKER ROLLER ASSEMBLY Part # 15100 & 15101

With the centre rocker set in the horizontal position, the front and rear dumbjacks (hangers) are to be set so the rollers in the spring rear (oblong) eyes are at the furthestest point from the front spring eyes. No weight is to be placed on the suspension during setting up. When weight is applied to the suspension after setting up, the roller will move partly from the end of the oblong eye.
